An Overview of Structured Synthetic Phonics Program Sequences

In the Winter 2014 edition of the Bulletin, we provided an overview of several high quality Structured Synthetic Phonics Programs (SSPPs) and their sequences through the initial (or basic) code until the introduction of the extended code. Since that time, many of these programs have been updated and new programs have become available. While there is no evidence to support that one program's teaching sequence is superior to another, it is very important that the program introduces letters in a logical and incremental progression. Once a program is selected it should be followed with fidelity, rather than in combination with several different programs and any decodable readers or additional resources used should also follow the same (or a closely aligned) sequence. The table over the page details each SSPP's sequence, from single letter phoneme-grapheme relationships and digraphs through to the introduction of the alternative spellings

in the extended code. It is important that the initial code is systematically taught and mastered before alternative spelling patterns for all the sounds of English are introduced.

Along with teaching the phoneme-grapheme relationships in isolation, it is critical that opportunities to apply this knowledge to extended reading and writing (dictation) activities is provided. As such, some high frequency, phonically irregular words are introduced at various points throughout the programs to allow for grammatically appropriate sentences and stories to be produced. These words (often referred to as sight words, tricky words or heart words) are not yet considered decodable based on the position in the SSPP sequence and are listed in italics in the table over the page. They should be identified as words that the student cannot yet fully decode and should be introduced as indicated in each program.

When choosing any SSPP it is important to check the teaching manual for the recommended process for introducing new sounds and letters. It is also important to familiarise yourself with the terminology used within each program, as there can be some variability across programs (for example, adjacent consonants may also be referred to as consonant blends or clusters depending on the program).

DSF provides training in Letters and Sounds, Sounds~Write, Dandelion Readers, Jolly Phonics and Little Learners Love Literacy.

Resources for these programs are available through the DSF bookshop and library.
Go to www.dsf.net.au for more information.

was my you they all are		into again all going hold where table too	
Phase 4	**Extended Code:**	**Level 1**	
More complex word structures including adjacent consonants - CVCC, CCVC, CCVCC, CCCVC, CCCVCC words. Explicit work on polysyllabic words.	50 sequential units which cumulatively introduce all alternate vowel and consonant spellings. The sequence commences with the most common spellings for the sounds /ae/, /ee/, /oe/, /er/, /e/, /ow/, /oo/ (as in 'moon'), /ie/, and /oo/ (as in 'book'). The concept that the same spelling can represent different sounds is also introduced, beginning with the spellings <ea>and <o>. Explicit lessons for teaching Polysyllabic words are introduced after working with the Extended Code for several weeks.	ai ee oa ur ea ow oo igh or oi ar air ear	
it's children said so have come was were there little one do when out what her		your gives does goes two	
Extended Code: Phase 5 introduces alternative spellings. It is recommended that this takes place over a 30 week period, systematically introducing the alternative spelling patterns. Phase 6 focuses on word specific spellings and choosing between alternatives. There is also a focus on prefixes, suffixes and other morphemes.		**Extended Code:** Level 2 introduces 3 alternative vowel spellings for each sound. Level 3 covers 5 alternative vowel spellings for each sound. Level 4 introduces more alternative spellings and common Latin suffixes.
